Gentle Reminder

Round 2 — The Build

Team: CORE LOGIC | Medhansh Desai, Team Lead

1. What You Built

- Automated background screen recording at 5 FPS using xcap library
- Intelligent AI scoring of developer activity (failed attempts, terminal usage, file switching, recurrence)
- SQLite persistence for all captured knowledge entries
- Frame-to-video export functionality using ffmpeg
- Clean, minimal design following 20 custom design rules
- Capture levels: notes-only to full-plus-prevention

2. Technology and Implementation

- Frontend: React 19 + TypeScript + Vite + Tailwind CSS 4
- Backend: Rust + Tauri 2.0 desktop framework
- Database: SQLite via rusqlite 0.31
- AI Engine: Local inference in src/aiEngine.ts
- Video Export: FFmpeg with libx264 encoding

3. What Changed from Round 1

- Added frame-to-video export functionality (not in original proposal)
- Fixed frame image display issue using Tauri convertFileSrc API
- Implemented SQLite persistence layer (required for real-world knowledge survival)

4. What Does NOT Work Yet

- Custom domain (gentle-reminder.xyz) DNS propagation pending
- Production deployment is not yet live (preview deployment is active)

5. Three Improvements for Round 3

- Improvement 1: Real-time activity monitoring with live dashboard
- Improvement 2: Multi-language AI chatbot with context-aware responses
- Improvement 3: Export to multiple formats (PDF reports, CSV data, video summaries)
